

THE DOCTRINE OF ACIDS INTHE Cure of DISEASES Farther Afferted : Being an Answer to some 06jections raised against it by Dr. F. TUTHILL of Dorchester in Dorsetshire. In which are contained fome things relating to the History of Blood : As also an Attempt to prove what Life is, and that it is principally fupported by an Acid and Sulphur. To which is added an exact Account of the Case of Edmund Turner Esq; deceased; as also the Case of another Gentleman now living, exactly parallel to Mr. Turner's. By JOHN COLBATCH, a Member of the College of Phylicians, London. LONDON, Printed for Dan. Brown at the Black Sman and Bible without Temple-Bar; and Abel Roper at the Black-Boy in Fleet-fireet. 1698

(iii)

READER.

HE Hypothesis I have advanced being new and contrary to the common received Opinions of other Physicians, a very few excepted, I am every day pestered with Objections of one kind or other; and therefore to fave my self the labour of writing Pacquets of Letters every Post-day, I have thought fit to answer those Objections that are worth taking notice of in this publick manner. The Gentleman whole Letter I have answered here, seems to be a Man of wonderful Candor and Ingenuity; A 2

genuity; and were it but for the satisfaction of him only, I should not think my time milpent : but however, hoping to do service to the Publick by it, I have suffered these Papers to come abroad, as they are. I confess they are not sufficiently polished for publick View; and at the same time the pains I have been at in composing of them is too great to have them confined to the private use of one person: and for the deficiences, I shall endeavour to supply them in some other Papers that shall be got ready for the Press as foon as possibly I can.

He that would pass the Course of his Life without Envy, must believe what is generally believed, and speak as others do; and whoever takes upon him to do otherwise, let the Success of his Undertaking be what it will, the Reward he is like to

I must confess that I am deficient in so many things in respect to the ornamentive part of Learning, which is scarce to be obtained out of the Universities, that I am altogether unfit to be a Champion in so great a Cause; but I have so much reason to be positive that the Hypothesis I have advanced is true, that from the Hints I have given I dare almost be confident, that even in my own time the Cudgels will be taken up, and the Hypothesis maintained and afferted by one who is able to go through-stitch with it better than I can. In the manifestation of the greatest Truths to the World, Men of very mean parts are frequently made use of to be the first Broachers of them, but the farther clearing of them is left to Men of the most subtile and refined parts; and were my Hypothesis but rightly handled, I don't doubt but it would . 1 prove

(ix)

prove the most Glorious of the kind that ever appeared upon the Stage of the World. However, till the thing is undertaken by some better Hand, I shall not be wanting to prosecute it as far as I am able.

I have one thing to beg of those who shall give themselves the trouble of reading these Papers, and that is, that they would not pass a rash Judgment upon me, but that they will be pleased to examine well what I have offered both in this and my former Tracts, laying aside Partiality and Prejudice; and if they find that I have not made things sufficiently clear, if they will but inform me of it, and lay their Doubts before me, I will spare no Pains to make things yet more clear.

A Treatife of the Gout, wherein both its Caufes and Cure are demonstrably made appear; to which are added fome Medicinal Observations concerning the Cure of Fevers, &c. by the means of Asids.

All by John Colbatch, M. D.

Douthester in Com. Dorf. Aug. 9. 97.

(xi)

SIR,

· · ·

10

5

have perused your ingenious Treatile of the Gout; in which you seem to accuse Alkalies as the Original of all Diftempers: Before I subscribe to this Opinion, I desire to be satisfied in a few Points. The Grand Argument on which you build your Hypothesis, is taken from the green Colour of the Serum which arises from its mixture with Syrup of Violets. It must be confest, that Alkalies usually give it this Tincture, and there may be something of an Alkaly, or at least analagous to it, in the Serum: But

(xii)

ia R

ý.

lj tille i j ile ste

Ser

Litor

But notwithstandiug this, the many Inferences which you are pleased to draw from this Phænomenon, in my Opinion will hardly hold good. For, 1. If this Alkalizated Serum is the Original of Distempers, then it must follow that wheresoever we find this Serum, there must be likewise a Distemper: Now I appeal to your self if the Blood of a healthy Person will not give Syrup of Violets a green Tincture, does not then the Argument labour? may we not impute this Phænomenon to arife rather from a due mixture of the Principles, than from any vitiated Habit of Blood? But, secondly, there is another way of difcovering an Alkaly besides that of its Appearance, and that is by its effects, to wit, its Fermentation with Spirit of Vitriol. Now I aver this green Serum will not ferment with the aforesaid Spirit : Wherefore if it be an Alkaly, it is an Alkaly of a particular nature. It must be granted that

(xiii)

that we oftentimes find in the Blood some Particles of a very warm nature predominant, in which cases I have found Acids to be of great uje: but whether they are of an Alkaline nature or not, I leave the Learned to determine. If they are Alkalies, then either fixt or Volatile; if fixt, how comes it to pass, that on the Diffolution of the Texture of the Blood, they claim the highest Place, and nothing will serve their turn, but they must needs swim in the Serum? If volatile, how is it that we many times find this warm Serum to be little better than insipid? Volatile Salts you know are aculeated, and affect the Palat strongly. May they not rather be of a fulphureous Nature, since it is the Nature of substances to fit uppermost on the Dissolution of Bodies? But thirdly, if Alkalies are the Original of all Distempers, whence is it that in Dropfies, Catarrhs, some Gouts and other Distempers, we find the Texture of

And and a second

of the Blood so thin? 'Tis observable that those Particles you term Alkalies, the more the Blood is saturated with them, of the more thick consistence it is, as we see in Pleurisies, Rheumatisms, and other inflammatory Cales (in which Distempers, if in any, these Alkalies abound) is not then its Tenuity rather to be imputed to Acids? Do not Acids immediately put the Blood in a Fusion, and render it thin ? Besides, if Alkalies did always offend and canfe Pain, it must follow that Acids must give ease : But I assure you I have often experienced the contrary; for upon the exhibition of Rhenish, White-wine, and other Acids, I have found the Pains immediately exasperated, and many times it has been a long while e're they went off. Again, if the Gout proceed from an Alkaly, what is the reason you use so much Sassafras in its (ure? Is Sassafras an Acid, and so proper to subdue this Alkaly ? I have only

ly a word or two to speak concerning the green Colour of Syrup of Violets, and To I have done. I believe it may be turned green without an Alkaly : On the exhibition of it to Infants it comes away green very often, and brings away a great deal of green Matter by stool; and yet I believe they do not abound with Alkalies. You may read in a late Author of undoubted Credit, that upon an Infant's swallowing of a Dose of Testaceous Pouder, an extraordinary Ferment was raised in the Stomach of the Child : Now how could this Ferment be raised, if it had not an Acid to work upon? Besides, does not Experience shew that nothing is so proper in Infants Distempers as Alkalies? I have some more things to offer; but I desire you would be pleased to satisfy me as to thefe. I should be glad to close with your Opinion, and embrace any thing that is new; for I believe Medicine, the it has met with great Improve-

(xvi)

Improvements of late, to be capable of far greater. I'll give you no farther trouble, only after Thanks to you for your indefatigable Labour in fearching out the Truth of things, subscribe

Your Humble Servant,

The

The Doctrine of ACIDS in the Cure of DISEASES farther asserted, &c.

Worthy Sir,

L

Have read your Letter with all the Pleafure and Satisfaction imaginable, the Objections you have raifed against my Hypothefis being the most *Jolid* and *fubstantial* I have ever yet met with: And you may affure your felf that I have so great a Value and Esteem for *Truth*, that I would not dare to contend for any thing which is the Product of my shallow Understanding, that in the least stands in opposition to it. B

But as I would not by any means in the World oppofe Truth, fo at the fame time I would not beguilty of fo much Cowardice, as to quit its Intereft, becaufe I meet with a multitude of Oppofers. Altho your Objections do carry the faireft fhew along with them of any thing I have met with of this kind; yet I don't at all doubt, but very eafily to clear my felf from them, the which I fhall endeavour to do with as much Candor and Friendship as you propofe:

Letter. " I have perused your in-"genious Treatise of the Gout, in "which you seem to accuse Alkalies as the Original of all Distempers : Before I subscribe to this Opinion, I defire to be satisfied in a few. Points. The Grand Argument on which you build your Hypothesis, is taken from the green Colour of the f "Serum

(3)

" Serum, which arises from its mixture 3 66 with Syrup of Violets. It must be " confest, that Alkalies usually give it this Tincture, and there may be " something of an Alkaly, or at least . " analagous to it, in the Serum : But 17 66 notwithstanding this, the many In-" ferences which you are pleased to draw from this Phanomenon, in my *Anfwer.* As for my accufing

1

1. 31

Answer. As for my accusing Alkalies as the Cause of all or most Diftempers, I must confess it was a very bold Undertaking, especially when by fo doing, I opposed such Multi-I tudes of Great and Learned Men, who by very strenuous and learned Argumi ments afferted the quite contrary; whom I could not suppose but that I should greatly dilplease, by difturbing them in the quiet possession is of an Opinion that had long been embraced by all sorts of people. I my B 2 felf,

felf, as I elfewhere acknowledg, was formerly as great a Stickler for the Use of Alkalues in the Cure of Difeases, and did as little believe that they were the Causes of them, as any one of my hottest Opposers now doth. The Methods by which I came to change my Sentiments I shall here we faithfully relate to you.

Whilft I was fairly jogging on im the ordinary Method of Practice, a certain Gentleman recommended tor me a powerful Acid, which he told me I might rely upon in the Cure offifome forts of Fevers. When I confidered the thing as an Exalted Acid, I could fcarce give the leaft Credit tor what he faid, tho at the fame time I knew he had no defign to impofe upon me: however confidering the fatal Succefs that frequently attended the Uie of Alkalies and Alexipharmicks, (which however at that time I durfil not attribute to the Medicines, but the Malignit)

(5)

Malignity of the Distempers) I was re-Golved, upon the first poor Patient I had in a Fever, to try what the forementioned Acid would do; and after a Multitude of Irials, both upon Poor and Rich, I found I could by the means of my Acid cure most sorts of Fevers much more effectually and certainly than ever I before could by a the means of Alkalies and Alexiphar-Minicks. The Effects of this Medicine, (which is a very cheap one, and known to every body) back'd with fome other Observations, put me upon arthinking that Fevers and other Distemmpers did not proceed from the Blood's abounding with Acid Particles, but on the contrary with Alkalious ones : for f it had abounded with Acids, the giving of more Acids must have aggravated the Symptoms, whereas on the contrary, I found by the means of my simple Acid (which however was communicated to me as the greatest B 3 Secret)

Secret) I could take off the most dreadful Symptoms attending most Fevers with all the Ease imaginable. Upon which being greatly in love with Chymistry and Chymical Operations; and having a convenient Laboratory, and all Necessaries at hand, II was refolved to examin the Blood of Persons in all Distempers as fast as I could and conveniently procure it, to see what Substances abounded; and after a multitude of Experiments in most Cases, II could never find any reason to charge Acids in any one. And that I mayil and not be defective in my Duty to sal friendly and ingenious an Objector, I shall here trouble you with some offer an my first Experiments.

(7)

JUly the fifteenth I committed to Dif-tillation the Blood of a corpulent Lady of a sanguine Complexion, who eats and drinks highly, and who had formerly had for some Years together an inveterate Leprosy, which I cured by Cinnabarine Medicines, &c. But at that time she had a severe Fit of a Rheumati/m, occasioned by Cold taking. This Blood and Serum, as it came out of the Veins, weighed two Ounces, one Dram: I obtained from it nine Drams of a clear Phlegmy Liquor a little impregnated with Volatile Alkalious Salt, which altho it was scarce manifest to the Taste, yet it might readily be discerned by pouring a little of it upon some good Syrup of Violets, which it presently would turn green. Besides B 4 which

which Phlegmy Liquor, I obtained five Drams ten Grains of a strong Volatile Alkalious Spirit, as strong as the Spirit of Harts-horn usually sold in the Shops; fixty five Grains of fetid Oil; and in the bottom of the Retort there remained Jeventy Grains of a light Caput Mortuum.

Experiment II.

July the thirtieth I committed to Diffillation feven Ounces three Drams of the Blood of a Woman, who had for about three Weeks laboured under great Obstructions of her Nerves; she had a Lassitude and Faintness upon her, and in this time from Fatness the became very lean, and so weak as not to be able to go about the House; she likewife complained of a wonderful Coldness and Numbness in her Head, and was so deaf as not to hear any thing unless less People spake very loud to her. She had always before this Illness been used to eat and drink well, and was of a Constitution somewhat Phlegmatick. This seven Ounces three Drams of Blood, Serum, and all together, such as it came out of the Veins without standing to puttefy, afforded four Ounces five Drams of Phlegm, and in the Neck of the Receiver that caught the Phlegm a few Grains of Volatile Salt in a dry form, with which the Phlegm was so impregnated, that it would readily turn Syrup of Violets green. One Ounce five Drams and 15 Grains of a strong Volatile Alkaline Spirit, two Drams six Grains of fetid Oil, and in the bottom of the Retort there remained two Drams two Scruples of a very light Caput Mortuum.

Experiment V.

(12)

11

Alle

105

- main

A^T the same time I committed to Distillation the Blood of a Gentlewoman, who had for many Years been afflicted with the Stone in the Kidneys, and at that time laboured under the most terrible Fit of the Gout that ever I saw : It weighed two Ounces seven Drams, two Scruples and seven Grains. It afforded two Drams of a most volatile Alkalious Spirit before the Phlegm, one Ounce four Drams of Phlegm, and six Drams twelve Grains of Volatile Alkalious Spirit of the common fort; two Drams of fetid Oil, and one Dram and half of Caput Mortuum. The Volatile Alkalious Spirit that came over before the Phlegm in this Experiment, was what I never saw before; but her Fit of the Gout was also the most extra-

(13)

extraordinary that ever I met with, there being scarce a Joint of any of the extreme Parts that was not at one and the same time affected.

Experiment VI.

1

A Ugust the tenth I committed to Distillation four Ounces two Drams of the Blood of a young Man of a Janguine Complexion, and in a state of Health: It afforded two Ounces six Drams of Phlegm that was perfectly inspirie, and so destitute of Volatile Alkaly, that an Ounce of it would but just discolour a very small quantity of Syrup of Violets. a Jim

-)" ?!

20

be so many little Bodies of Fire. This Phænomenon very rarely appears, but when it doth so, it is for the most part in the Caput mortuum of the Blood of people in a state of Health.

Experiment VII.

He fame day I committed to Distillation the Blood of a Gentlewoman, who for many Years had had a fhort convulsive Cough, and always subject to an Obstruction of her Menses; she was then big with Child, and besides her Cough, she then complained of a Sickness in her Stomach, and a loss of Appetite, with a lurking Fever, and an Inflammation in her Face. It weighed seven Ounces fix Drams, and afforded four Ounces four Drams and a half of Phlegm, impregnated with a highly Volatile Alkalious Gas, that

(15.)

0

. .

in.

1A

ſ

1"

that would readily turn Syrup of Violets green, and in quantity would effervesce with Spirit of Niter, Sea-Salt, Vitriol, &c. It afforded also one Ounce four Drams of highly exalted Alkalious Spirit, one Drop of which would turn a confiderable quantity of a strong Solution of Syrup of Violets as green as Grass; about ten Grains of light Oil that swam upon the Spirit, and three Drams of a heavy fetid Oil, that sunk to the bottom of it, and two Drams two Scruples of Caput mortuum.

Experiment VIII.

TRUCT THE Gas, and Date

A Ugust the eleventh I committed to Distillation three Ounces two Drams of the Blood of a Man of a black swarthy Complexion, and of a highly scorbutical habit of Body. It afforded

(16)

forded one Ounce three Drams and ten Grains of Phlegm, with a little volatile Alkalious Gas mixt with it; one Ounce fifteen Grains of a highly strong Alkalious Spirit, two Drams of setid Oil, which all sunk to the bottom, and two Drams of Caput mortuum.

Experiment IX.

A Ugust the twelfth I committed to Distillation the Blood of a Maid of a pale Complexion, who had what we call the Green-sickness : It weighed three Ounces six Drams, and afforded one Ounce seven Drams of Phlegm, unmixt with Gas, one Ounce two Drams and a half of a strong Alkalious Spirit, one Dram two Scruples and a half of setid Oil, which all sunk to the bottom, and one Dram and a half of Caput mortuum.

4 Committed to Distillation three Ounces two Drams of the Blood of a very worthy Gentleman, who was a very worthy Gentleman, who was very Hypocondriacal, and had had a very great Pain in his Back and Hips of many Years, and once a month had violent distending Pains in his " left Side, and at that time was much utroubled with Wind. It afforded me of an insipid Phlegm one Ounce six Drams; of a highly impregnated Ald kalious Spirit one Ounce two Drams and a half; of fetid Oil, which all funk to the bottom, one Dram seventeen Grains; of Volatile Alkalious Salt, which stuck in the Neck of the Retort in a dry n form, seventeen Grains; and of Caput mortuun one Dram five Grains.

Experiment

(18)

Experiment XI.

S Eptember the ninth I committed to Diffillation three Ounces of the Blood of an Honourable Lady, who had had for two Years a scrophulous Tumor in one of her Breasts, and of a very scorbutick babit of body, and subject to wandring Pains and nervous Obstructions: It afforded one Ounce six Drams of Phlegm, fix Drams of strong Alkalious Spirit, one Dram seven Grains of fetid Oil, and one Dram tenus Grains of Caput mortuum.

I could add a multitude of Experiments of this kind, but they belonging to another Piece, I have thought fit to trouble you with no more; and in relation to these few, I think it necessary to premise a few things, that I may make things as clear as may be. To

(19)

To avoid the grand Objection, that by exposing things to violent Fires there are new Substances produced, which were not existent in the Concrete before, (which Objection I shall take occasion to make appear to be but a very trifling one) I took the following Method, as the only one by which I could most clearly satisfy my felf, being the most plain and easy one imaginable.

1 3

1

1015

12

MIS

× ~ ~ ~

114

To

I first of all put the Blood as it came out of the Veins, Serum, and all together, into a glass Retort with a very wide Mouth, to which I had a Receiver adapted as fit as possibly I could. I afterwards put my Retort into a fand Furnace, under which I made a very gentle Fire, which I increased by degrees, till the Drops began to fall at about a Second's distance one from another; in which state I continued it, till the Phlegm was all come over, and unles in one or two very extraordinary C 2 (afes

Cases I have always found the Phlegm come over first, which perhaps to some may appear a Paradox, that what we commonly call Volatile Spirit and Salt should not rise before the Phlegm; but upon trial, I am sure whoever will give themselves so much trouble, will find it true. When it had dropt so long that one Drop being dropt upon two Drams of a strong Solution of Syrup of Violets would turn it green, I then changed my Receiver, and continued my Fire till nothing more would come over ; and this last I call Spirit, having always a proportion more or less of a fetid Oil mixt with it. Now what we call Spirit of this kind, is only a proportion of Volatile Alkalious Salt mixt with so much Phlegm as will well difsolve it : Therefore I confess the most nice way of making these Experiments, is to separate the Volatile Alkalious Salt by it self, without any mixture of Phlegm ; +

Phlegm; but every Experiment requiring a fresh Pessel, and the Vessels themselves being very chargable, it would be almost impossible for any private Man to make a sufficient number of Experiments without the assistance of the Publick, which occasioned me in the Preface to my Tract of the Gout, to propose a Publick Stock to carry on this Work, to bring things to an absolute certainty, if possible.

However, altho these Experiments are not the most accurate that might be made, yet they are plain and easy, and are capable of being made by those who want the common Apparatus for a Laboratory. An Iron Pot set up in the Corner of a Chimny, with a few Retorts and Receivers, are all that are necessary for the making of these Experiments; whereas for the other sort there are required long bolt-Heads, each of which will serve but for one Experiment, with nice Furnaces, and C 3 fo

so much other charge and trouble, that few private Men are either capable or willing to be at, to make fuch a number of Experiments that are requisite. But by the way I have set down, a Man may make a vast number of Experiments for a small charge; it is but going by one Rule in the making of them: and I don't see, but a Man may act with as much certain. ty as in the other, only I must confess it is more liable to the Objections of Cavillers; but for such I have no value, it being only for such candid ingenious Persons as your self, for whom I am willing to take pains.

Let a Man but nicely observe to change the Receiver, when one Drop will turn the Syrup of Violets green, and that Blood that affords the greatest quantity of such Spirit afterwards that abounds with such Particles, may reafonably be supposed, nay I think does certainly appear to abound most with

(23)

• 3

in the

1.

(1)

i e Va

()

with Volatile Alkaly, or at least what by all Mankind is taken to be fuch, it answering all the Phænomena that Spirit of Harts-born and Salt Armoniack will do; affecting the Palat in the same manner, and making an Effervescence with all sorts of Acid Spirits, such as Spirit and Oil of Vitriol, Sulphur, Sea-Salt, Nitre, Vinegar, &c. Now if such a Substance as this be not to be called an Alkaly, I 41.0 should be glad to be informed what is; but it is what I at present call so for want of a better Name : and that Blood that by this simple easy way of Distillation affords the greatest quantity of Spirit of equal Strength, I cannot forbear to charge with abounding with a greater quantity of Alkaly than that which affords less. And in examining the foregoing Experiments, it plainly appears that the Blood is of People labouring under the Distempers there mentioned, doth afford a C 4 much

much greater quantity than that of the healthy Person; that of the Person in in a Consumption affording the least of any of those in a morbid state, for which a very good reason may be given : the great quantity of luxuriant Alkaly being thrown upon the Lungs, which causeth the Ulceration there, and the discharge of such a quantity of Pus or Matter afterwards as emaciates the Body even to a Skeleton.

4. P

As for the Fire's producing new Substances, which were not existent in Bodies before, or which is more pertinent to the point in hand, making Acids Alkalies or Alkalies Acids, or producing Alkalies or Acids from Bodies in which they did not exist before, I think there is not the least weight in it : I am sure it is contrary to my Experience, and I believe to the Experience of all inquisitive Chymists that have ever gone before me; tho I confess

confess there have been some superficial ones that have dreamt fuch things; but to the best of my apprehension, without the least reason for so doing. I never could find, but manage Vitriol in what manner, or with what degree of Fire you please, and it will always produce an Acid Spirit; do the same by Hartsborn, Blood, &c. and it will always produce an Alkalious one, or at least what we call so : for if people will cavil about Words, we shall never have an end of Controversies; and indeed most of the great Controversies we have had in the World have been more about Words than Things ; Men have contended more earnestly for the Shadow than the Substance. But my present Controversy with my Worthy Brethren is not such; our Difference is whether Diseases proceed from the Blood's abounding with Alkalious or Acid Substances, things which differ

1

fer much more than in Name, their Natures being directly opposite one to the other. I confess there are some who have complained both of me and others that have written concerning Alkaly and Acid, that we have not sufficiently explained our selves what we mean by those Names : This I take to be a Dispute about Words only, fince there are few People in this day, who upon the first view of any of those things of either Tribe, especially of the manifest ones, cannot readily give their Judgments to which they belong, and this even amongst those who are not Physicians: and therefore altho we may not be able perhaps to give an exact Definition of the Words; yet fince by these Words all people know we mean fuch and such Substances whose Natures are directly contrary, that ought to breed no difference. And for my part, I know no other use of Words, than by

(27)

by the means of them to impart my Mind to others; and if that Intention be once answered, I care for no more, but shall leave the Philologists n no squabble as long as they please. But as for the producing either Alkalies or Acids by the means of Fire out of those Bodies in which they did not exist before, or the changing of an Acid into an Alkaly, or producing either out of the other that was fimply one of them before; if any one will monstrate such a n Experiment, or de-I monstrate such a thing without Fallacy, I shall own my self his humble Ser-Vant.

As for the Inferences I draw from the Serum of the Blood turning a So-lution of Syrup of Violets from a blue Colour to that of Greennels, being what all manifest Alkelies will do As for the Inferences I draw from what all manifest Alkalies will do, all manifest Acids changing the same blue Colour into Redness; I see no reason at all that I have to recede from

1

J, v

t Les

13 4

1

pul.T

lice

and

i.Minc.

from what I have faid concerning that matter : For if it betrue that all manifest Acids do change a Solution of Syrup of Violets from a blue Colour to that of Redness, and all manifest Alkalies do change the said blue Colour into a green one; if: the Serum of the Blood doth fo change: the Colour, a Man may, to the best: of my Apprehension, without Pre-110:2 sumption conclude, that that Serum: which doth change a Solution of Syrup of Violets from blue to green, doth abound with Alkalious Particles : And I am sure if it did abound with Acids, it would not fail of changing the blue Colour of the said Solution into a red one: Which is a thing any Man may easily try; let but a sufficient quantity of any Acid Spirit be mixed with the Serum of a sick Man's Blood that will before in a small quantity turn a very large quantity of I de La Solution of Syrup of Violets from blue

(29)

blue to Greenness; if the Acid be so

doing. Dr. Fran. And be by poperties of the be by pag. the tells up be by pag. the tells up be by pag. the tells up be the only performent to the be tween Alkalies and Acids, I fhall the be tween the tells up be tween the tells up the be tells up the be tween the tells up the be tells up the tells up permanent Colours comes only from the different nature and different mixture of Acid Salts with Alkaly Salts, which we may observe by divers Experiments.

Experiment I.

13

111-

All Acids destroy blue Colours, and all Alkalies make them reappear.

Expe-

(30)

Experiment II.

Syrup of Violets, which is a compofition of Acid and Alkaly, becomes of the fairest green in the World when it is mingled with some Alkaly, as with Oil of Tartar made per deliquium, and reddish when some Acid is mingled therewith.

Swalve in his Tract of Alkali and Acidum, pag. 141. hath it much to the fame purpose : Syrupum Violarum præ oculis habeto, quia suspectam habes Solutionem plumbeam per Acetum in Saccharum redactam. Syrupus ille ab Acido quovis rufescit, ab Alkali virescit; binc infervit aptissime dignotioni utriusque. Quodvis Acidum eum sistit rubrum, sicut quodvis Alkali viridem, fixa & volatilia uniusmodi sunt, &c.

But my Hypothesis doth not altogether hang upon so slender a Thred as the change of Colour, tho that be

2

j)(

ni)

5

RUP.

all 1

a better Foundation than a great many Hypotheses are built upon. You may very well remember that I brought this Experiment upon the Stage, only to satisfy Gentlemen who have not the conveniency of making more elaborate ones : And all Mankind having imbibed the Notion that if any thing ailed them, they immediately concluded that it proceeded from an Acidity of their Blood ; I therefore thought it my Duty to convince them of the contrary in the most familiar manner I could; but I never expected that Physicians should take up with it, I referring them to a more certain Method, viz. to analize the Blood of their sick Patients, and to compare the Substances produced from it, with the Substances produced from the Blood of People in a state of Health : And if once they will but take that Method, I am morally certain that the number of my

my Enemies will every day decrease. But let People continue to say what they will of me, I shall endeavour to satisfy my self, and to act for my Patients with as clear a Conscience as possibly I can : And if after all I am reproached by my Brethren, I must bear it as well as I can. It never will be in any Physician's power to make people Immortal; but at the same time I am absolutely certain that peoples Lives are frequently prolonged by the use of proper Remedies; and I doubt not but that they are also shortned by the use of improper ones : And if we are mistaken as to the Cause of Diseases, I don't see how we can readily find out proper Medicines.

Letter. "For first if this Alkalisated Serum is the Original of Distempers, then it must follow that where soever we find this Serum, there "must

(33)

must be likewise a Distemper : now - 1 66 I appeal to your self if the Blood of a healthy Person will not give 66 Syrup of Violets a green Tincture, 2 1 66 does not then the Argument labour? 3) ((may we not then impute this Phanomenon to arife rather from a due 66 mixture of the Principles than 166 55 from any vitiated Habit of Blood?

ŝ

14

'n

(1.

l'i

171

2.

Answer. I confess this is close arguing, and much to the purpose: But you may remember that I no where say that the Serum of well Persons Blood will not turn a Solution of Syrup of Violets from a blue Colour to that of Greennels. But on the other hand, I have afferted that the Blood of those labouring under any Diftemper I have met with will do it, in order to prove that the faid Distempers did not proceed from Acids; because if it had abounded with Acids, in-Read of turning it from blue to green,

(34)

green, it would, as is before observed, have turned it from blue to red. Well, but still the Serum of the Blood of a well Person will cause the fame change in the Solution of Syrup of Violets as that of a sick one; and therefore to rid my self of that Difficulty is the great thing I have now to do.

First, I all along throughout my Tract of the Gout, the Piece you refer to, and elfewhere, do endeavour to prove that the Blood of Persons in a morbid state doth more abound with Alkalious Particles than that of well Persons, but no where fay that the Blood of well Persons hath no Alkaly in it : And that the Blood of fick. People in all or most Distempers doth abound with such Particles more than that of those that are in a state of Health, is to be demonstrated several Ways : First, If you take an equal Proportion of the Serum of the Blood

-1-

of

(35)

of a healthy Person, and of that of a Person in a Fever, Pleurisy, &c. and pour them into the same Quantities of Solution of Syrup of Violets of equal "Strength, you will find that wherein the Serum of the fick Person's Blood was poured, to be much greener than the other. Secondly, If you stake two Ounces of the Blood of a heal-Whithy Person as it comes out of the 10 Veins, Serum, and all together, and mutwo Ounces of the Blood of a Person in a Fever, Pleurisy, a Fit of the Gout, &c. and commit them to Distillation win the same degree of Heat, you wwill find that the Blood of the fick Person will produce a much greater inquantity of Alkaly than that of the Person in a state of Health.

Secondly, What shall I do with this Alkaly that is to be found in the Blood of healthy Perfons? Because ethere Body has some Alkaly in their Blood, must every Body therefore D 2 la-

(36)

labour under some Distemper? Why truly I can't say that I ever yet met: with that Person, who upon Ariet Enquiry had not some Complaint or other to make. Mankind fince the Fall issi fubject to Death every moment; there being fince that time a Principle of Death, in opposition to that of Life, implanted in our Natures; and not only in our Natures, but in the Natures of every thing else for our sakes : And God Said to Adam (upon his Fall) Cursed be the Ground for thy Jake, &c... I confess there are many in our Age, who will laugh at and ridicule me for having recourse to Sacred Writ, e-mil specially to the Writings of Moses, which they look upon as a kind of Romance; but let them laugh on. If there were not a Principle of Death man within us, how is it possible for a Man one Hour to be in a good state of man Health, and the very next to be expiring ? How this may be I shall endeavouil

(37)

be deavour to demonstrate as clearly as possibly I can.

All the Alkaly that there is to be found in the Blood is most certainly an Excrement, and in a way of being en carried off by some of the Emunctories; d and if any of the Emunctories chance Lito be stopt, that this excrementitious Alkaly hath not room to pass out by them, why then there is a Distemper of some kind or other caused, the Blood being overcharged with this ex-Ecrementitious Matter. How many Distempers are occasioned by what we call taking of Cold, which is nothing elelse but a Constipation of the Pores? What is the Occasion of the Jaundice, but an Obstruction of those Vessels in the Liver, which separate the bilious Particles from the Blood? and what dreadful Distempers does the Jaundice frequently cause ? How are Mortals tormented by the Stone in the Kidneys and Bladder? and what is the origi-D 3 nal 10 2

(38)

nal Cause of them, but an Obstruction in the Kidneys, whereby the excrementitious Alkaly, which should be carried off that way, by its over long stay in those Parts is converted into that Substance we call a Stone? And who-1 ever will give themselves the trouble of distilling Stones either from theil Kidneys or Bladder, will find that they are composed of Alkalious Particles. I could expatiate, and I doubt not: give an Account of the Caule of all or most of the Distempers attending Human Bodies, from the excrementitiouss in the Alkaly being hindred from being car-11 701 ried off by the proper Emunctories... 201 And I appeal to all Candid Ingenious Persons, even those who are my un greatest Enemies, whether all the Ex. crements of our Bodies are not Alkalies When I speak of Excrements, I don'il mean that which is carried off by Stool. I having told you in another Place that my squeamish Stomach would new veni

110/

ver yet give me leave to make Experiments upon chat, to know what Parts it contained ; but every Body knows that the Bile is the greatest part, if not all of it, carried off that way; and that the Bile is an Alkaly I suppose no Body doubts.

I know there are a great many who will reply, That we will allow you that the Matter, or at least the Saline Substance that is discharged by the Glands of the Skin, by Urine, the Bile, Tears, &c. are Akalious; but there is another Excrement, the which you take no notice of, which is a very considerable one, and that is the Matter discharged from the Glands of the Mouth, called Spittle, which in all respects seems to be an Acid. To which I answer,

That the Saliva or Spittle is so far from being an Excrement, that it is one of the most noble Juices that our Body affords ; it being the only D 4 Men-

Menstruum that Nature hath furnished us with for the diffolving of the solid Food we eat, and turning it into a nutritious Juice : For by chewing of our Meat we compress the Salival Glands, and cause them to throw out a sufficient quantity of the Juice contained in them; which being mixed with the Food, is along with it carried into the Stomach, where the Office of Digestion is performed. But those People, who swallow their Meat without chewing, seldom or never digest it, and are always lean. Now when I speak of Saliva or Spittle, I don't mean that inviscated, coagulated Substance that People hauk up in a Morning, or discharge when they have a Cold as they call it, that being a dege. nerate Saliva; but I mean that thin, Limpid Substance that some great Tobacco-Takers lavishly let run from them: which is the only reason that the smoaking of Tobacco takes away molt

(41)

most Mens Appetites; for would they Imoak Tobacco as a great and worthy Prelate and my self do, and as all the Turkish Nation do, which is to swallow their Spittle, they would rarely want an Appetite.

17.1

But that I may return to my proper Businels, which is to prove that all the Alkaly we have in our Blood is an Excrement, and in a way of being carried off as such, or for want of being carried off, would cause a Diftemper of some kind or other. And here give me leave to acquaint you, that according to the best of my Ap. prehension, the Matter of all our Distempers is the same; but according to the difference of the Part immediately affected, the Distemper differs: And indeed when I confider the wonderful Structure of our Bodies, of what Multitudes of minute Parts it is composed, instead of being surprized at our being fick and out of order so often

often as we are, I am almost amazed to think we are ever well. All Alkalies that I know of will presently cause Rottenness and Putrefaction in Animal Substances, as may be seen in making of Glovers Leather, an Instance of which I have given in my Tract of the Gout, from a very good hand. Nay it is a thing very eafily to be experimented by any one; for let but a Piece of Flesh of any kind be put into a Liquor well impregnated with Alkaly, and in a small time (tho in the Winter, when things are not subject to putrefy) it will turn to a meer Putrilago, a Mass of Rottenness and Corruption. Whereas let a Piece of the same Flesh be put into Liquor impregnated equally strong with any Acid, and it will preferve it from Putrefaction. Alkalies, whether Volatile or fixt, being applied to the Skin, will either caule a Mortification, or destroy the Tone of the Part; where-

whereas Acids of equal Strength will prevent Mortifications, where they are actually beginning, and frequently reftore the Parts to their Tone, where it is loft.

But it may very reafonably be askt, where is the Acid in the Blood that does us all that Service you speak of, or what becomes of all the Acid we take in, you owning Bread to be an Acid, and several other things that are every day used by all Mankind, when in your Analysis of the Blood you mention no such thing, and seem to intimate, that altho People take them in never so great quantities, yet they never abound so as to cause a Distemper? This is what may reasonably be offered, and is very necessary that I should clear as well as I can.

The Life of Man I take to be a Fire or Flame, and all we eat and drink, together

together with the Air we draw in, to be as Fuel for this Flame; and that which is not proper Fuel for it is caft off as Excrement. Now I appeal to all Mankind converfant in Chymistry, whether the Excrements of Fire, or of the Fuel of which it is made, viz. Associated and Soot, be not Alkalies; and that our Lives are nothing elfe but a Flame or Fire of the same Nature with that commonly used, or very analogous to it, I think is plain.

It is the Nature of all common Fire to confume whatever is a proper Pabulum or Fuel for it, and to leave its Excrements behind it, which, as is before observed, are Ashes and Soot; in the Ashes is contained a fixt Alkaly, and in the Soot a Volatile one. It is very plain that the Body of Man would soon be confumed, unless supplied with proper Food; and how could this be, unless there were something to confume it?

Common Fire cannot subsist where there is not a due Access of Air to it: Is it not the very fame thing with the Life of Man? let him be but inclosed in a Place where the Air is not capable of coming at him, and immediately he expires. It is well known that it is the common Practice of Miners, and those who have occasion to go into subterraneous Vaults or Passages, to carry Candles, Torches, or some such things along with them, not more for the conveniency of the Light they afford them in such dark Places, than for the Security they are to them against the most imminent Danger, viz. the Loss of their Lives: for as soon as they once perceive their Lights begin to grow dim, common Prudence and Experience teaches them to retreat; and whoever has chanced to be fo fool-hardy as to advance after the Light hath been extinguished, has *fcarce*

fcarce ever returned either to repent, or give an account of his Folly. A fatal Accident of this kind happened to two Men in a great Vault in a Tard belonging to my Father's House, into which Vault, if we put a large Pan of Charcoal well lighted, they would be extinguished in a moment; and the two Men before mentioned, as near as we could guess, lost their Lives in as simall a time.

Heat and Warmth are the conftant Concomitants of Fire: And that there is both Heat and Warmth in the Body of Man, none that is Master of his Senses will deny: But why should I make a Distinction between Heat and Warmth, when they only differ in degree? But not to stand any longer about that matter: How is it possible for the Heat of our Bodies to be suffained, unless there were a Fire within us to do it? We are generally as hot, if not hotter in Bed, altho we use no Exer-

Exercife to excite the Motion of our Blood and Juices, than when we are up and in motion. Nay, mere Motion, let the great Des Cartes and his Followers fay what they will, will never caufe any Heat in fluid Bodies, altho excited never fo much : I confess in folid ones, upon violent Friction or the like, there will a Heat arise; but what relation hath that to us, when we are asleep?

There is a received Maxim, that there is no Smoak but there is some Fire: Every Body must be sensible what vast quantities of Steams there are continually discharged from all Parts of our Bodies; and how that comes to be, unless occasioned from some Fire within us, I cannot understand.

I confess I have the Concurrence of some of the greatest Men perhaps the World hath afforded, that the Life of Man is a Flame; but at present I have not

(48)

not leisure to peruse their Writings to see what they have said upon this Subject. , W 1

If any Man Ihall ask me, how this Flame came to be first kindled? I Ihall make no other reply, but defire him to inform me how the Ovum came to be impregnated with the Masculine Seed, so as to make it capable of producing a Human Body? and when he hath done that, I will quickly tell him how this Flame came to be first kindled.

The next thing I have to do, is to confider what is the proper Pabulum or Fuel for Fire, and this every body knows must be something that is fulphureous: Now there is scarce a Sulphur we know of that is not combined with an Acid; Sulphurs seeming to be the genuine Vehicles for Acids, with which they are generally united, few Sulphurs being devoid of Acids, and few Acids devoid of Sulphurs; and

(49)

511

15

1

1

and as the one or the other predomiin nates, so they are denominated either Acido-Sulphurea or Sulphureo-Acida. As Sulphurs are the Vehicles of Acids, so Acids seem to be a sort of Vinculum to Sulphurs, by the means of which they are hindred from Disfipation. Whenever a Sulphur is devoid of Acid, it is of so Volatile a Nature, that it is fcarcely to be preferved from Di/sipation : Not that I suppose any Sulphurs to be perfectly destitute of an Acid; but the less Acid they have mit mixt with them, the more Volatile they are; such are Rectified Spirit of Wine, Campbire, Orc. And Mr. Godfry assures me that he can make Spirit of Wine so Volatile, that a Drop of it m won't fall to the Ground, but disappear almost as soon as it is disingaged from the Mouth of the Bottle in which it is contained. Now the purer the Pabulum is, the less Excrement is produced; Spirit of Wine and Camphire E pro-

(50)

produce little or no Excrement at all; whereas Oil Olive, Bees Wax, Tallow, &c. afford a great deal of Soot, in which is contained the Volatile Alkaly. Most Vegetables commonly in use for burning, afford a great quantity both of Ashes and Soot, some more of one, and less of the other; as Oak a great quantity of Ashes in which is contained the fixt Alkaly, and but a little Soot, in which the Volatile Salt is contained. Beech on the other hand produces but a small quantity of Ashes, but a large quantity of Soot: this is what I have been informed of by those who burn quantities of Wood. The Substances we live upon, and are nouristied with, are not to be reckoned amongst the number of those which afford no Excrement upon burning: and by the way I can't understand what should become of all we eat and drink, unless, as is before observed, there were a Fire or Flame within

in us to confume it; and the Confumption is so great, that we are not able to live without a constant and frequent Supply. And which to me is none of the least Arguments to prove that our Life is a Flame, is what is manifest by every day's Experience, viz. Let a very fat Man be seized with a Fever, or any such Distemper, attended with a total loss of Appetite; and the Fat, which is the proper Fuel for Fire, will first be consumed : and in such Distempers it is frequently seen al that very corpulent Persons will in a small time be wasted to a Skeleton; when at the same time the sensible Evacuations of Urine and Stool are less Ithan in a time of Health; which thing could not be, unless there were a Flame to cause that Consumption: . And wherever there is a Fire or Flame, especially when supplied with gross Matter, there must be a throwing off Isf Excrements; which is the reason E 2 tha

(52)

that the Blood in Fevers, and other Diftempers of that nature, abounds more with Volatile Alkaly than that of well People, because the Flame is more excited at that time, and the secretory Vessel designed for that purpose being some way or other obstructed, cannot carry off the Excrements so fast as they are produced.

t Tri

Let us confider what all the Alkalious Salts, whether Volatile or fixt, are ... I suppose no one can produce me all fixt Alkaly, which is the bare Product of Nature : The very Name it self being derived from the Salt of the Ashes of the Herb Kaly, as I have obferved in the Appendix to my Essay off Alkaly and Acid, in concurrence with several Authors, who have written upon the same Subject; tho none that I know of have ever written upon in with the same design that I have done. But that you may see I amin not singular, I shall produce two org three • 5

(53)

• 7

1

three Authorities. Swalve in his Treatife of Alkaly and Acid, pag. 48. does thus define it. Originem Nominis Alkali ab incinerat à Herbâ Ægyptiac à Kali desumptam haud ignoras : Salibus illud fixis Er lixivialibus abbinc applicatum; illudg; primario judicatum Alkali, quod Genfin suam è cinere & lixivio traxerat. Tachenius in his Hippocrates Chymicus defines it much after the same manner. Fit itaq; Sal Kali ex Herba Kali, magna copia in Ægypto proveniente, quæ ibidem vina ridis exuritur, & ad nos transfertur; d quibusdam vocatur etiam Soda, Alumen catna mum, & vero nomine Sal Kali appellatur; non reperitur tamen Sal Kali in Natura, nec in omnibus tribus Regnis, nisi ab Artifice ignis ope producatur. For my own part, I could never yet see any such thing as a fixt Alkaly to be obtained any other way than from the Ashes of Plants, which are that part of them that is altogether unfit for Fuel for common Fire, they plainly appearing to me to Berger Bart Bart E. 3 be

....

be an Excrement, and as fuch will rot and deftroy all Bodies, especially Animal ones, that they are mixt with. In Animal Bodies there is no fuch thing to be found unless in the Bile, which is an Excrement, and seems to be as genuine an Excrement of Fire as any thing what soever, both from its burnt Ta/t, Colour, &c. and I am fure if it be detained in the Body, will play the Devil.

As for Volatile Alkalies, they are to be found in Soot, in Plants after Putrefaction, in Urine, in Horns and Hoofs of Animals, and in Blood; and altho Sweat abound with a great quantity of it, yet that is not to be obtained in quantities fufficient to draw Volatile Salt from it. Soot issues the Volatile Excrement of Fire, or of the Matter of which Fire is made. Urine is an Excrement of our Bodies, and the Volatile Salt in it the Excrement of Animal Fire, or of that which is its Pabu-

1:1.3

Pabulum or Fuel. The Horns and Hoofs of Beafts are generally allowed to be excrementitious Parts of their Bodies, and they afford the greatest quantity of Volatile Salt of any thing besides. As for Blood, the Volatile Alkaly to be obtained from it, is only the excrementitious part of it, or rather of the vital Flame, or the Pabulum of it, in a way of being carried off by some of the Emunctories, which, if it chance to be obstructed in its Paffage, affects the Body with some Distemper or other. As for the Volatile Salt to be obtained from Plants after Putrefaction, I shall give you a particular account of it, by reason that some Men have made a great stir about it, and spent a great deal of time in quest after it, supposing it to be one of the grand Medicines of Nature. Most, if not all Vegetables do principally confist of a Volatile Acid and a Sulphur, which make them a E 4 proper

(56)

proper Fuel for Fire : Now let any of the Aromatick Plants, fuch as Rofemary, Sage, Lavender, Mint, &c. be well dried, and afterwards be put into a Hole in a moist Cellar, and rammed down very hard ; let them lie without a Cover till they grow hot; after they have done so some time, and the Acido-Julphurecus parts are exhaled (which is much the fame, as if they had been burnt) they will then contract a stinking ill Smell; when they are in this state, put them into a tall glass Bottle, with a glass Head, and in gentle Heat of Sand you will obtain a Volatile Alkalious Spirit and Salt, good for nothing else that I know of, but to bring other Bodies into the same state of Corruption that the Plants from which it was extracted were before it was drawn from them. Thus I have let you see what is my Judgment concerning Alkalies, and how they are produced.

But as for the Acid that we take in as Food and otherwife, that, together with the Sulphur, are made use of as a Pabulum or Fuel for the vital Flame; and were not the Julphureous Particles in some measure suppressed and detained by the means of an Acid, the Ibred of our Lives would be but very fhort. Dr. Andre of Caen in Normandy in his Discourse of Alkaly and Acid, speaking of Acid, pag. 21. Engl. Translation, he saith, There is nothing in this World which owes not its birth to an Acid Salt : Nothing can live nor be multiplied without it : It is that Soul of the World, of which the Antients have fo often told us. Tachenius in his Clavis Hippocratis Medicina, from pag. 3, to pag. 11. gives strange Encomiums of it, some of which I shall here transcribe. Speaking of Acid, he brings in Lullius. Nos & multi alii, inquit, vocamus illum Filium Solis: nam primò per Solis influentiam fuit generatus per naturam

(58)

naturam sine adjutorio scientiæ vel artis; es ideo Aristoteles vocavit Solem patrem & Terram matrem omnium vegetabilium, crc. He afterwards says, Acidum it aq; est or pingue antiquissimum principium, omnium rerum vita or fons, quod variis nominibus nominarunt Scriptores, ut ignem, solem, aurum, spiritum, sulphur, forma, & sexcentis aliis nominibus, que omnia synonima sunt, estq; eadem res, cui tamen diverso respectu diversa nomina imponuntur; nobis tamen eam hic or ubique commodiore opportunitate Acidum vocare libet. Again, A Sole itaq; ut a sonte defluunt Acidum naturale & lumen vitale, que reipsa sunt idem, sed officio distinguuntur : Acidi enim munus est ad interiora Naturæ penetrare; luminis verò exteriora patefacere, utcumq; solis radii operentur; adeoq; Sol est primum naturale organum, cujus accessu or recessu omnes naturæ operationes variæ reguntur, intenduntur ac remittuntur. Hinc Cosmopolita ingeniosissimus; si non esset

and to

effet vis vegetabilis sulphuris (id est Acidum pingue or filius solis) non coagularetur aqua in berbas: si itaq; Acidum à sole fluens infunditur in materiam ex gr. mineralem statim recipit determinationem natura, es virtutis mineralis, es sic de cateris animalibus, & de Vegetabilibus rebus dixit Lullius; & proptered quod hac aciditas naturalis omnibus mundi Materiis copulatur, Mercurii nomen à sapientibus adepta est: Et licet oculus vulgi quotidie videat Acidi naturalis multiplicationem, nec non incorporationem, attamen illud non cognoscit: exempli loco sit minera salis petræ Patavii jam evacuata, que quinque vel septem annorum decur su rur sus repletur, est enim terra ejus nutrix, Hermete teste, unde hic spiritus in illa corpus assumit, atq; fit inflammabile nitrum.

Acids are without doubt the most perfect Bodies in Nature, fince they cannot undergo a Putrefaction ; and what we take in by our Mouths is so far from being too much for us, that bestides

(60)

1.1

L.

12.2

23

1

sides it we are not able to live without drawing in fresh Supplies from the Air every moment; and that the Air is filled with Acid Salts, a Multitude of common and obvious Experiments do evince : as for instance, Let Vitriol be distilled with the most violent Fire imaginable, so that it will not yield the least drop of Acid Spirit more; do but take out the Caput mortuum or Colcathar, and expose it to the open Air under a Shed, where it may not be rained upon, and in a few months time it will become good Vitriol again, and yield as much Acid Spirit as it did at first time, and this it will do ad infinitum : The same thing may be done by the Caput mortuum of Seasalt, Nitre, &c. Now if the Air did not abound with Acid Particles, from whence came those insipid Bodies that were totally deprived of the Acid they had in them by the first Dif-. tillation,

(61)

tillation, to regain the same quantity of Acid that they had before they were distilled ? If you expose the Caput mortuum of those things that by Diftillation had afforded an Alkalious Spirit or Salt, that Caput mortuum will never regain its Alkaly again, let it lie never fo long; which argues plainly that the Particles of the Air are not Alkalious : And therefore were Acids so injurious to Mens Bodies as some would have us believe they are, every Draught of Air we take in must poi-Ion us, fince the Air is full of Acid Particles; and I believe no body doubts but that the Air has a free Communication with the Blood, if not by the Lungs, at least by the receptory Pores of Skin : But I think it's plain that there is a Communication with it both ways.

By all the ways I could yet contrive, I have not been able to procure one Grain of pure Acid from the Blood of either healthy or fick People: But

4

5

1.2

But in the before recited Experiments you find there is always a proportion of fetid Oil, with which Oil the Acid is imbodied to make it a proper Pabulum for the vital Flame; and when once Acid and Oleaginous Bodies are well united, which they will very readily do, it is no very easy matter to cause a Separation of them. Now the reason that this Oil bath such a very ill Savour is from its coming over the Helm along with the Volatile Alkaly; all Alkalies, whether Volatile or fixt, giving a very ill Smell to Julphureous oleaginous Bodies, especially if together they are exposed to a great degree of Heat; and the Heat that is required to bring them over the Helm is much greater than that of our Bodies, tho in a burning Fever : Yet from the Action of the Volatile excrementitious Alkaly upon the Julphureous parts of the Blood, may I think a very good reason be given for the Symp-

(63)

Symptoms that attend most, if not all Fevers; for all Alkalies destroy Sulphurs, as may be seen in the making of Soap, Hepar Sulphuris, &c. Sulphurs are the active Principle in both Animal and Vegetable Juices; Alkalies by breaking and dividing the Particles of the Sulphurs excite Fermentations, and by degrees cause a total Diffipation of them. Acids are a sort of Vinculum to Sulphurs, and therefore they Suppress Fermentations, and keep the Sulphur from Dissipation : From whence I infer that a true Oleosum must be the great Medicine ; but it must not be such a one as commonly goes under that Name, which is only a Combination of Volatile Alkaly with Spirit of Wine and Aromatick Oils or Spices, instead of which it must be an Acido-oleosum, an exalted Acid, combined after the foresaid manner : The Life of Man it self being principally Supported by an Acido-oleosum.

If

(64)

If any one asks me what I mean by Sulphur? My Anfwer is, whatfoever is inflammable. And with fuch kind of Substances the World is almost every where filled: For without them neither the Lives of Men nor Beasts could be any way supported; and therefore those places that are best supplied with them, are best stock: with Animals of all kinds; whereas those that are deficient in them, such as the Desarts of Arabia, &c. are almost wholly destitute of all kinds off living Creatures.

Letter. "But secondly, there is another way of discovering an Alkaly besides that of its Appearance; and that is by its effects, to wit; its Fermentation with Spirit of Vitriol Now I aver this green Serum wilk not ferment with the foresaid Spirit: Wherefore if it be an Alkaly it is an Alkaly of a particular nature

G TI

(65) 'f It must be granted that we often-" times find in the Blood some Par-" ticles of a very warm nature " predominant, in which cafes I " have found Acids to be of great use : but whether they are of an " Alkaline Nature or not, Ileave to " the Learned to determine. If they " are Alkalies, then either fixt or Volatile; if fixt, how comes it to pass, that on the Diffolution " of the Texture of the Blood they 111 66 claim the highest place, and no-1 66 thing will serve their turn, but they 166 must needs swim in the Scrum? if Volatile, how is it that we many " times find this warm Serum to be "Ittle better than infipid? Vola-114 68 tile Salts you know are aculea-1.65 ted, and affect the Palat strongly. (T.B) (C May they not rather be of a sul-Vince phureous nature, fince it is the Na-I KC ture of such Substances to sit uppermost on the Dissolution of Bodies? -11--F Answer.

,[[

1.10

ų ...

Answer. I own it is one of the genuine and constant Effects of an Alkaly to cause an Effervescency, when mixt with Spirit of Vitriol or any other Acid Spirit; but whether this Effervescency be to be accounted a Fermen-. . tation, I greatly question: Tho Alkalies will excite Fermentation in fermentible Liquors, as is well known to many Mechanicks, and I fear too well by the Brewers about this City. As: for what you mean by the green Se- Me rum, which you say will not ferment or effervesce with Spirit of Vitriol, II cannot tell: But sure I am, that if you put a little Spirit or Oil of Vitriolis into a small Bottle, and upon that a pour some Serum of Blood that will he turn Syrup of Violets green, it willim immediately become intensity hot and a great many Bubbles will im mediarely rife, which looks ver the like a Fermentation, if it be not one theren

(67)

therefore when you made this Experiment, upon which you are so confident, there must needs be some Error committed; for upon your urging this thing, the first Opportunity I had I made the Experiment assessment and it succeeded the very first time; and I doubt not, but if you will give your self the trouble of making this Experiment again, it will not fail of fucceeding.

As for those warm Particles that you say are often predominant in the Blood, I must confess I don't understand what you mean by them; the Blood, whilst we are in a state of Health, is always warm, the reason of which I have before given you. If we have a Fever upon us, the Blood exceeds its natural Temper, according as the Fever is more or less violent: Now the Cause of this Excess of Heat in a febrile state I take to be as follows; in most Fevers, e-F 2 Specially specially in the beginning of them, there is a Constipation of some of the Emunctories; so that the excrementitious Alkaly, which should be carried off by them, is detained in the Blood, which by breaking of its Globules, and dividing of the sulphureous Particles, which are the Pabulum of the vital Flame, does either excite what we call a Fermentation, or rather by dividing the sulphureous Particles, and subduing the Acid that held them to-1 + 24 gether, does increase the Flame to an intense degree. An Instance of which we have in common Fire, as I have elsewhere taken notice of, and shall here again repeat, viz. let the Matter of which Fire is made be laid close together, and then kindled, and it will confume leifurely and by degrees ; whereas let it be laid at some m little distances one from another, and it will confume with a rapid and intense Flame. Salt-Peter also and men Brim-Ŧ

Brimstone being mixt together, will burn with a gentle and easy Flame; but by adding a Proportion of Charcoal-Dust (as is the Method in making Gun-powder) wherein is contain'd the fixt Alkaly of the Wood, the said Alkaly by causing a Division of the Particles of the Nitre and Sulphur, does so alter the Property of it, that instead of burning placidly and easily, the least Spark of Fire falling into it, will cause an Explosion, viz. make it take Fire all at once, and so be consumed as 'twere in an instant. Are not the Attacques of some Fevers and other acute Distempers much like to ... this Explosion, wherein Nature seems to be overthrown, and the whole Course of it put out of order almost in an instant? This is all at present I think necessary to take notice of in relation to the warm Particles you peak of; and that Acids are the only Medicines to suppress this unnatural Heat, F -2

(70)

Heat, I think I have already made appear. As for the Inferences you are pleased to draw from them, I think I have nothing more to do with them, but flightly to touch at them, they having already fallen under my Consideration. And I have sufficiently demonstrated that Alkalies are the: Causes of all preternatural Heats in. our Bodies.

But supposing that preternatural Heats are occasioned by the superabundance of Alkalies in the Blood, your still seem to be dissified about theming . also: For, say you, if they are fixed ones, how comes it to pass that one the Dissolution of the Texture of they will Blood, they claim the highest Place and nothing will ferve their turn, but they must needs swim in the Serum? if Volatile, how is it than " we often-times find this warm Serun little better than insipid ? Volatile Salt you know are aculeated, and affected thell

(71)

1.2

the Palat strongly. May they not rather be of a *fulphureous Nature*, fince 'tis the Nature of fuch Substances to fit uppermost on the Dissolution of Bodies ?

First, I don't remember that I have any where said that fixt Alkalies do claim the highest Place in the Dif-Solution of Bodies, and that they swim uppermost in the Liquors, in which they are dissolved : But this I believe you infer from my Experiment with the Serum, which is the lightest part of the Blood, and therefore is upper= most in the Poringer, after it hath stood some time, and that a Separation is made in the Parts thereof. Now I did not make use of the Experiment with the Serum and Syrup of Violets, thereby to intimate that Serum only was over impregnated with Alkalious Particles; but that. being the most colourless part of the Blood, was therefore most proper for fuch F 4

such an Experiment: For should I have made such an Experiment with the fibrous and globulous Parts of the Blood, which are combined together in one Mass, they are so imbued with a scarlet Dye, that a small quantity of it would tinge a great quantity of Solution of Syrup of Violets with the fame Colour, altho at the fame time it were greatly overcharged with Alkalious Particles. Therefore in my plain and easy way of analizing the Blood, I have made use of it altogether, as it came out of the Veins. But if a Man confiders with what Rapidity the Blood moves along the Vessels, it is impossible but all the Parts must be so mixt together, that if the Serum be overcharged with Alkalious Particles, the other parts must be so also; or if the other parts be • overcharged, the Serum must be in like manner so. But however, as for fixt Alkalies, the Blood is very rare.)'

ly overcharged with them, the Substances we take in for our Nurishment affording very little of them after burning; and therefore Nature has provided but one Emunctory for the carrying them off, viz. the Ductus Biliaris, which empties it self into the Duodenum, and is conveyed off along with the Excrement of our Food by stool: Whereas there are Millions of Emunctories, besides that great Difcharge that is made by Urine, to carry off the Volatile Alkaly. But if at any time the Glands of the Liver are ob-Aructed, that the fixt Alkaly cannot be separated from the Blood, what fatal Effects does it produce ?

I have scarce ever known a true Afcites (which is that kind of Dropfy that is scarcely ever to be cured) which hath not had its Origine from an Obstruction of those Vessels in the Liver, which separate the Bile from the Blood. Nay frequently they have

1

1. . .

ľ

.

7

* 1.6 1_1 1

n 11 (

^ { ; ;

a Jaundice upon them thro the whole Course of the Distemper. But if not fo, I never yet knew an Ascites that had not a Jaundice preceded it; and in what manner the whole Oeconomy of the Body is destroyed in this Distemper, is but too well known. But this is not the only Distemper that hath its Origine from the Obstruction of these Vessels, tho it be one of the most dangerous.

Secondly, As for what you fay concerning the Insipidness of the Taste of the warm Serum, I suppose you mean that Serum which is overheated in Fevers, &c. the Serum being always marm, whilst People are alive. I can affure you it is contrary to my long Experience; for of many Years, it has been my Custom to taste the Serum of the Blood not only in Fevers, but all other Distempers, where I have had occasion to prescribe Blood-letting; and in some Fevers I have found the Vola-

11

K/2

Volatile Salt to bite my Tongue very severely, but never once could find the Scrum infipid: and by this way of tasting I can better judg of the Condition of my Patient than from the Colour of the Blood. But in those Cases where the Serum is much inviscated, as in most Pleurisies, Rheumatisms, and many Fevers, the Volatile Alkaly is so involved, that it doth not very ftrongly affect the Taste, tho it is never infipid that I could ever yet find. As for Volatile Salts being aculeated, and affecting the Palat strongly, I am very glad you take notice of it, fince the general Notion that most people have of all Alkalies is, that they are of such a sweet, soft, mild Nature, that they carry a sanative Virtue along with them wherever they go.

Thirdly, I own that fulplureous Subftances are wont to sit uppermost in the Dissolution of Bodies; and that the Blood is impregnated with substances,

libeats, and that Steel is an Acid I have elsewhere endeavoured to prove: And as a farther Proof of it I shall produce the Testimony of Beckerus (no contemptible Man) in his Minera Arenaria, pag. the 88th. Non recensebo jam qualiter ille spiritus esurinus in aquis subterraneis latitans, varia sibi Salium, Aluminum, Vitriolorum, Sulphurum, Realgarium mineralium compositionum species producat; nec demonstrabo, quà ratione supra terram in Aeris regione tractus quidam bujus Acidi spiritus de uno Polo ad alterum, & perillum acus Magnetica feratur. Hoc tantum hic loci allegabo, omne Acidum substantia martialis esse, in quocunque cleo, pinguedine, fuligine, limo, silice & arena; imo etiam ipsa flamma reperibile, ac ad oculum demonstrari posse: quacunque ergo natura Acida er martialis sunt, illa potestatem habent Alkali tanquam substantiam metallorum mercurialem alterandi or transmutandi. Now if this Thinness of the Blood be to be taken off, and

(80)

and the Blood brought to its due Consuffence 'by the means of Acids, it is not reasonable to suppose that Acids should be the cause of its fusion. But then I confess here lies a great Difficulty, viz. how is it possible for Acids to make the Blood thin, when 'tis too thick and viscous, and to bring it to a due confistence, when it is over fluid ? To which I answer, That fhould I pretend to give an account what Acids taken in the proper Latitude would do, I should be guilty of the greatest Arrogance imaginable; for that would be to pretend to as much Knowledg as Solomon had, who knew the Virtues of Plants even from the Cedar of Lebanon to the Hylop which grows upon the Wall. And Divine Providence had determined him to be the wisest of Men that had ever been before him, or that should come after him. All Plants from the greatest to the smallest are principally com-

1 4

composed of Acido-sulphureous Parcicles; for what Comparison is there to be made between the small quantity of fixt Alkaly that is to be found in the Ashes after burning, and of Folatile Alkaly in the Soot, in relation to the great quantity of Acido-Julphu-Feous matter that is spent in Flame? Dr to come nearer to the matter, let Pound of any Vegetable, which afords the greatest quantity of fixt Alkaly, viz. Broom, or any such Plant, be sufficiently dried, so that the suverfluous Humidity may be evaporated; fter that is done, let it be commitled to Distillation per se, and it will ford between two and three Ounces pf an Acid Spirit, with a good quanlity of Oil, when all the Art of Man s not able to procure from the Caput . Sortuum above two Drams of fixt Alaly, and, as is before observed, Froom is one of those Plants that ". Fords the largest quantity of fixt Al-G kaly.

(82)

kaly. Now the Acid Spirit and Oil are those Substances, which in burning serve to supply the Flame: and from the Caput Mortuum, unless it be afterwards burnt, there is no fixt Alkaly to be obtained. But here again to obviate the Objection before taken notice of, viz. that the Fire may produce new Substances, which were not existent in Bodies before, or that for instance, the fixt Alkaly to be produced out of the Ashes of the Caput Mortuum of the Broom, is only the Prop ve duct of the Fire: If this were so, why then the Ashes after all the Salt has been a once extracted, being again commit 2 ted to a Violent Fire must production more Salt; whereas on the contrar let it be committed to the Fire in the most violent degree of heat, and com per tinued there for never so long a time yet it will never after afford the lea quantity of Salt of any kind. Billing that I may return to answer the form

er Objection, viz. how Acids are capable of making the Blood thin when over viscous, and also to reduce it to its consistency when it is over thin : All the Bodies in Nature are differently Specificated by the all-wise Author of Nature, and at the same time are all animated by one Universal Acid Spirit, which is what the Antients were wont to call the Soul of the World, and I think not improperly. Now the more any Bodies are impregnated with this universal Acid Spirit, and its beloved Sister Sulphur, the more perfect they are ; and Gold, which is one of the molt perfect and durable Bodies in Nature, feems to be composed of nothing elle but a pure Acidum and Sulphur, as I think has been sufficiently made appear by some of the most strict En. quirers into Nature's Secrets. Now the more perfect any Bodies are, the more Acidum and Sulphur they contain, and afford the least quantity of Excre-G 2 ment.

(84)

ment, viz. Alkaly, that being the only Destroyer of all Bodies, and is what brings them to a state of Putrefaction and Corruption. Well, but what's all this to the answering of the Objection twice started ? Why it's only to make my way clear. But I shall now apply my self to it. There are two general sorts of Acids, viz. manifest, and inveloped ones : the manifest ones are such as immediately appear to the Iaste ; and these, altho originally the same, proceeding from the same universal Fountain, yet have different Operations upon Human Bodies. The inveloped ones are fuch as do not immediately appear to the Taste, but by taking of the Bodies asunder appear to be such. There is an Axiom that, Unumquodque in id dissolvitur unde compactum est: Every thing is dissolved into that whereof it is made. Now if this Axiom be true, as I think it is an infallible one, a Man may reason-+

. .

2 1

i

R

1.10

(85)

reasonably conclude that those Bodies, which upon their Diffolution are reduced into Acid Substances, are deids, tho before their Dissolution they did not appear to be so. Most Vegetables upon the Diffolution of them, or analyzing by the Fire, appear principally to be composed of Acid Substances; and therefore I think are to be accounted Acids, altho they are so differently specificated, and have such different Operations upon Human Bodies, that a Man who has not nicely examined them, would be tempted to believe that the original constituent Parts of them were much more different than they are. Now the more perfect and durable any Vegetable is, the greater quantity of Acidum and Sulphur it affords, and less of excrementitious Alkaly. And from the different Combinations of the two Sisters Acidum and Sulphur, I believe it possible to give a very probable Ac-G 3 . count

count of all the differences in Plants as to Colour, Taste, &cc. And as these two perfect (if it be lawful to call any natural thing perfect) Principles are more or less clogged with excrementitious Allkaly, so they are more or less durable as to themselves, and more or less friendly to Human Bodies, for whole use they were principally created; so that here you may see, that when I preach up Acids, it is not only Vinegar, Lemons, Oil of Vitriol, Oil of Sulphur, &c. that I recommend, but all the perfect Parts of the Creation, and decry the use of those things that are the Principles of Death and Destruction in Bodies, viz. Alkalies. From what I have before faid I think I may without Presumption, reckon Oak-bark amongst the number of Acids; and yet Oak-bark being given in Substance, or a Decoction of it, is so far from making the Juices over fluid or thin, that it will reduce them to a Con-

Consistence, when they are so: the same may be said of Bistort, Tormentil, and abundance of things of that Tribe : the same thing will Comfry Roots do, and all the things of that Tribe; the same I could say of many more, but here I have not room to expatiate. Asparagus, Parfley, &c. will make the Juices fluid when they are over thick and viscous, and so will a multitude of things more of that Tribe. I could range my self out into the mineral Kingdom, but the different Operations of them are so well known to every body, that I think it needless to take any particular notice of them : yet this much I will presume to say, altho it be foreign to my present Design, that after having made all the Enquiry into the Nature of Metals that Human Industry is capable of, I am perfectly satiffied that they differ one from another only in degrees of Purity; and therefore G 4

fore for ought I know the Business of Transmutation is not so ridiculous a thing as some People would make it. As to those Acids that are manifestly so, they greatly differ in their Operations upon Human Bodies. 1 have before observed that there are those which may properly be called Acido-Julphurea, and others Sulphureo-Acida: but in Nature I don't know a simple Acid or a fimple Sulphur, there being such an indestructible Bond of Union and Friendship between them, that they are never one without the other. Now those Acids that have most Sulphur united with them are Aperitives, Openers of Obstructions, and keep the Blood and Juices in a proper state of Fluidity: Those that have little Sulphur mix'd with them are Stipticks, and bring the Blood and Juices to a Consistence, when they are over fluid. What I have said upon this Subject is not the effect of Fancy, but of a Series of feveral

(89)

several Years strict and nice Observations.

Letter. "Befides, if Alkalies did "always offend and caufe Pam, it "must follow that Acids must give "ease: But I affure you I have often "experienced the contrary; for upon the exhibition of Rhenish, White-Wine, and other Acids, I have found the Pains immediately exasperated, and many times it has been a long while e're they "went off.

Answer. If Alkalies cause Pain, I do agree with you, that Acids of consequence must give ease; but I don't suppose that an ill habit of Body, that has been perhaps some Months or Years a contracting, is to be altered with a few Doses of the most exalted Medicine in the World, let it be Acid, or what you please. But supposing Acids

thing -

10

cids to be the most proper Medicines in the World to ease Pain, as I believe they are ; yet it is not improbable, but upon the giving a small quantity of Acid in such cases where there is a large quantity of Alkaly lodged upon any Part, so as to cause Pain, it may only in part diffolve the Alkaly, which was before more fixt, and fo by accident may exasperate the Pain; whereas by continuing the use of the Acid, the Alkaly would be perfectly dissolved and extirpated, and so the Pain would altogether vanish: But Pain being sometimes exasperated upon the first giving of them in too small quantities, has, I doubt not, been one great Cause of deterring people from proceeding in the use of them, and also of attributing to them the Cause of Pain: But in great Pains it is my constant Practice to apply Acids externally to the Part affested, as well as give them inwardly;

14

1

ly; and there are but very few Pains, especially Gouty and Rheumatick ones, that I am not able to overcome in a Imall time. And for the Pain you fay you have often found to be excited upon the giving of Rhenish and 14 bite Wine, I have affigned a Reason for that, if they are drunk in too large quantities, both in my Essay of Alkaly and Acid, and in my Tract of the Gout; and therefore shall not again repeat it, but refer you thither.

Letter. " Again, if the Gout pro-" ceed from an Alkaly, what is the " reason you use so much Saffafras in " its Cure? Is Sassafras an Acid, " and so proper to subdue this Al-66 kaly?

Answer. I can cure the Gout, if there were no such thing as Sassafras; I only use Sassafras in Apozems, as a proper Vehicle to dilute other Medicines in

in the Stomach. But however Saffairing fras is no contemptible Medicine; and if you will but give your self that trouble of Distilling a Pound or two on it in a Retort per se, if you afterward reckon Saffafras amongst the number of Alkalies, I am mistaken; and if I am so, I shall willingly own it. 19 5

(92)

Letter. " I have only a word on " two to speak concerning the green " Colour of Syrup of Violets, and so II " have done. I believe it may be " turned green without an Alkaly :: " On the exhibition of it to Infants " it comes away green very often, 66 and brings away a great deal of " green Matter by stool; and yet I 66 believe they do not abound with « Alkalies.

1

1 11

1 10

140

Answ. I own that upon the exhibition of Syrup of Violets to Infants it will frequently occasion green Stools : But from

(93)

from whence doth that proceed, but from its Mixture with the Bile in the *Imall Guts*? and that the Bile is an Alkaly I know not any one that doubts.

Letter. "You may read in a late Author of undoubted Credit, that upon an Infant's fwallowing of a Dofe of Testaceous Pouder, an extraordinary Ferment was raised in the Stomach of the Child: Now how could this Ferment be raised, if it had not an Acid to work upon? Besides, does not Experience shew that nothing is so proper in Infants Distempers as Alkalies?

Answer. The Author you speak of is my singular good Friend, and a Man for whom I have a very great Value and Esteem; and as to the Truth of the Relation you mention, I can readily affent to it: But if you have read the Appendix to my Essay of Alkaly

ly and Acid, you cannot but remember, that I there acknowledg that A-11 cids may sometimes abound in the Stomach, and cause a Diforder, but init no other part of the Body; which thing I have so fully handled in that place, that should I recite what II have there said upon this Subject, my Enemies would accuse me of Tautology, and therefore thicker I shall refer you: and if what I have there faid be not satisfactory to you, I shall endeavour to give you what furthen Satisfaction I am able. As for the Cure of Infants Diseases, I don't see but that they require the same Methodss to be taken with them, as with growm People, only the Medicines given them must be more mild and gentle, and in less quantities, considering the wonderful Tenderness of their Natures.

Letter. "I have some more things " to offer; but I desire you would " " beek

(95)

" be pleased to satisfy me as to these. " I should be glad to close with your " Opinion, and embrace any thing " that is new; for I believe Medicine, tho it has met with great Improve-" ments of late, to be capable of far " greater. I'll give you no farther " trouble, only after thanks to you " for your indefatigable Labour in " " searching out the Truth of things, " fubscribe

examining it in the Balances of Reafon and Experience; and if after fuch Examination you find what I have advanced to be Truth, I don't doubt but to find you a zealous Champion in my Cause : But if otherwise, I beg of you that you will convince me of my Errors, and I shall be very ready to write a Recantation. As for the Improvements that have been made of late, they have principally belonged to Anatomy, and indeed they have been very confiderable; and of all the Physicians of Europe, those of our own Nation have had the greatest hand in them. But as for the Improvements in the practical Part of Physick (setting aside the Discovery of the use of the Peruvian Bark in the Cure of Agues) they are very inconfiderable : The most that has been done of that kind, was done by the indefatigably Industrious Dr. Sydenham, and I heartily wish that we had more Dr. Sydenhams at this day. Sir,

Sir, there are abundance of Imperfections that you will meet with; but if you did but know the great hurry I have been in, and how little time I have had to fit composedly in my Study, you would readily pardon a great many of them : But this I can assure you, that had I not had an earnest desire to serve you with some other such Candid, Ingenuous Persons as your self, I would not have deprived my self of so many Hours Sleep (having little other time to command) as I have been forced to do, to put things in that Order they are : At present I have nothing more to add, but that I am

Yours to Command,

JOHN COLBATCH.

The

(98)

The CASE of EDMUND TURNER Efg.

N Monday Night about twelw a Clock, being August this thirtieth, Madam Turner cam to my House, and told me that Mr. Turner was very ill at milling Lord Wharton's at Winchington, and withal defired me, that I would im mediately get my felf ready, and g down to him to take care of him which accordingly I did, and got the Winchington the next day by one Clock. When I came there, I found Dr. Fry of Oxford had been there form time, and was then at Dinner; for mi went up to Mr. Turner to inform m felf as nicely as possibly I could of h Case; after I had done which, I cam a

dow

11

(99)

down to Dinner, and as soon as Dinner was over, I desired the Doctor that we might confult together what was proper to be done for the distressed Gentleman. But before I take notice of what passed between the Doctor and my self, I shall exactly relate the Case, with the Occasion of his Illness.

On the Saturday Night before, Mr. Turner, with two other Gentlemen sate down to drink, and continued at it till seven or eight next Morning, but I and cannot learn that the Quantities they drank were extraordinary : At which time they all went to bed, the other two Gentlemen lay in Bed the whole day, and eat nothing but Water-Grewel; but Mr. Turner got up in the Afternoon, and eat boiled Mutton, with a great deal of strong Broth with Mushj rooms in it, and drank plentifully both of Wine and prodigious strong Beer, and then went to bed again, and pre-sently fell asleep; but early next H 2 Morn-

5

(100)

Morning he awaked in the mound dreadful condition imaginable. When I came to him his *Circumstances* were and follow.

He had a violent Pleurify, and Pl ripneumony upon him, as was plainll to be perceived by a most sharp Pau in his left fide, which he greatly complained of, and a prodigious Shorn nefs of Breath. He also complaines of a wonderful Nausea and Sickness æ his Stomach, and had a Fever upon him to the most intense degree, with a great Stupor and Dulness in his Head

Dr. Fry had some Hours before came sent a Prescription to Mr. William an Apothecary at Ailesbury, of which have here inserted an exact Copy.

For Mr. Turner, August 31. 1697.

He

(102)

He had also about an hour before I came taken away about seven Ounces of Blood, the same quantity having been taken away (as I am informed) the Day before by the Order of Dr Wilson a Physician of the Neighbourhood! I told Dr. Fry that I could not in con-science agree to the use of the Medicine. he prescribed. The Nausea at his Stor mach was so great, that I feared the Linseed Oil would increase it to such a degree, that it would be of ill conse quence; and for the testaceous Pour ders, &c. they would excite the Hur ry and Diforder in his Blood to a great: er degree, and increase the Inflammation of his Lungs, and I fear'd inevitably ruin him. He askt me what Method and I would propose? To which I re plied, that in my Opinion according to the laudable Custom of the Great Dr Cole, he ought to lose at least twent empty the Vessels, and make room foi

(103)

5.10

1.00

for the Blood to circulate through the Lungs : That at due Intervals he should take a moderate quantity of fhould take a moderate quantity of Tartarum Vitriolatum and Cremor Tar-tari in a Spoonful of Syrup of Vinegar, drinking afterwards a large Draught of Pectoral Decoction, which would take off the Nausea at his Stomach, and promote Expectoration, and perhaps take off the Nausea at his Stomach, and promote Expectoration, and perhaps gently carry off the undigested Matter, which lay in his Stomach by Stool : That he should be allowed moderately cooling Liquors as oft as he defired them, in every Draught of which he might take about ten Drops of dulcified Spirit of Nitre, which might help to take off the Inflammation of his Lungs, and calm his Blood : That he should take a Spoonful of a Mixture of Pectoral Syrups often, in which was contained a convenient quantity of Oximel of Squills, which is a great Promoter of Expectoration. To take off the Stupor and Dulness in his Head, I proposed a Cataplasm H4

(104)

Cataplasm of Mustard, Horse-Raddish Roots, Rhue, and Castor, to be applied to the Bottoms of his Feet.

LA PLAN

ħ

To none of these things would the Doctor comply, neither could I comply with his Methods; so after many long Debates, we at last agreed to go up separately to Mr. Turner, and acquaint him, that we could not agree, and that he must discharge one of us. Dr. Fry went up first, and when he came down I went up; but for fear that things might be misrepresented, I would not go up unless Mr. Wats (a Man eminently known in this City) would go with me to hear what I said. Mr. Wats at first was unwilling, but at last consented. When I came up to Mr. Turner, I told him Dr. Fry and my felf could not agree, and therefore one of us must be discharged; I likewise told him that I had sufficient reason to believe that the Method I had proposed for him might

10

1

might retrieve him, but that Dr. Fry was more politive as to the success of his than I would be of any Method I could use in a much less dangerous Case than his was, and therefore I thought it was his most prudent Method to continue him: To which he made me no other Answer, but defired me to go down again, and see if we could not find a Method of Reconciliation, or Words to that purpose: Upon which I went down, and told the Doctor what he said : After a farther Debate without any compliance on either side, we agreed at last to get Mr. Was to go up and know who must be discharged : when Mr. Wats came down, he brought us word that Mr. Turner desired to speak with us both together; accordingly we went up, and when he faw us, he defired we would not stand upon any little Punctilios, and begged of us that we would give him a Vomit, for

(106)

0

for that after any Surfeit he was wont to take a Vomit, which always reliev'd him. I readily consented to give him a Vomit, and proposed Oximel of Squills with large quantities of Posset-Drink (as Mr. Wats may well remember) and if that did not work, to excite it with Salt of Vitriol : But to this neither would Dr. Fry agree, but closely urged the use of the Medicines he had prescribed, upon which Mr. Turner assented to take them. I staid all that Afternoon and the Night following, but had no hand in any thing that was done. I went up with Dr. Fry about fix a Clock to see how he did, and at that time his Pulse seemed to be somewhat mended, it having been extreamly bad before. About ten (just before 1 went to bed) I went up again with the Doctor to see how he was, but then I found a most lamentable Pulse, there being nothing but a little trembling Motion to be felt; upon which

(107)

•

,

- 22

1

ł

ş

7

1

which I defired the Doctor to walk out of the Room a little, when I told him that things lookt very ill, for that his Fever was extreamly high, his Breath very short, and his Pulse as is before related, and that if he did not mend that Pulse he would drop his Patient; his answer was, that all was well enough : upon which I had nothing more to say, he not being my Patient. Next Morning about seven a Clock I went again to see him, and found him much after the same manner he had been the Night before, but the Doctor told me he hoped all would be well; so I went to Breakfast, and whilst I was at Breakfast, I told one of my Lord Wharton's Servants (to the best of my remembrance it was the Butler) what my Apprehensions of Mr. Turner were, and that I did not see any hopes of his Recovery: But Mr. Turner being solely under Dr. Fry's Care, I did not think fit to stay

(108)

stay any longer to neglect my Patients in London, and do him no other Service than to go up now and then, and look at him : so away I came without taking my leave of him; but before I went, I wished the forementioned Servant, if Mr. Turner should enquire after me, and know I was gone, that he would acquaint him that I was unwilling to take my leave for fear of disturbing him. Of all that passed between the Servant and me, Mr. Turner's own Son was a Witnefs, and was much concerned that his Father was not under my Care. As I was coming home, about fix Miles on this side Ailesbury I met Col. Cornwel going to see Mr. Turner, who sent his Man to me to enquire how he was; I made answer, that I hoped he was somewhat better, fearing that if I had told him my real Sentiments he would have pressed me to have gone back with him; and as things ftood 751

(109)

ftood I did not care to return. By that time I had come about fix Miles farther, I met Madam Turner, to whom when fhe askt me how Mr. Turner did, upon the fame confiderations I made the fame reply I had done to Col. Cornwel. After I was gone Dr. Fry prefcribed more Linfeed Oil, and a Pearl Cordial.

About eight a Clock at Night, being Wednesday, I came home, and after I had made two or three Visits, and eat my Supper, I went to bed; I had not been in Bed half an Hour, but Col. Cornwel's Man knockt at the Door, and defired to speak with me; When he came to me, he told me Mr. Turner was much worse than when I left him, that Dr. Fry was discharged, and he begged me that I would come down again to him; for that he would take nothing more from any one, but what I should direct. Upon which I got a Calash and four Horses 25

(110)

· The

2

as soon as possibly I could, and went down again. I got to Winchington on Thursday about twelve a Clock, and when I came there, I found the poor Gentleman in the most profuse Sweat imaginable, his Breath short to the last degree, and almost no Pulse at all: But the Pain in his Side was gone, which his Lady (who was then with him) and those about him took for a good Sign : But I told them that his Shortness of Breath continuing, and his Pulse being fo very low, it was rather a bad one, and that he was in a most deplorable condition; and I appeal to every one of my Lord Wharton's Family, who askt me how he did, whether I once gave them the least Encouragement to believe that he would recover. His Shirt that he had upon him was as wet as if it had been dipt in a River, and as cold as Ice, and so were both the Sheets; therefore the first thing I did was

(m)

.

.

1

.....

,

1

•

•

•

2¹

1

,

~

1

was to free him from this cold wet Linen; in order to which I got as large a Fire made in the next Room as the Chimney would bear; I then set a Shirt and a pair of Sheets that had been before used, to be well aired and heated : in the mean time his Lady and her Maid with hot Napkins rubbed him, and made him as dry as they could ; after which with all the Caution imaginable, we put on a hot dry Shirt, and took away the cold wet Sheets, and put those that we had well heated and aired in their room. This matter just as I have related it I can have sufficiently attested, altho it be positively said about the Town, that I took him out of the Sweat, and put him on clean Linen, without airing it at the Fire at all. He being prodigiously thirsty, begged of me that I would give him something that might allay it; upon which I ordered them to make him

2

(112)

a Mixture of four Parts small Beer, one Part VV bite-wine, some Juice of Lemons to make it grateful, and to sweeten it with Loaf fugar; and he being a great Lover of Nutmeg, defired that a little of it might be grated into it, which, confidering the Stupidnefs in his Head, I agreed to. Of this Liquor I allowed him to drink as plentifully as he pleased; confidering the Profuseness of the Sweats he had had, I durft not then venture to bleed him, altho his Fever was as violent as ever. But to the Apothecaries I prescribed as follows.

he

5. 12

.....

-

51

Sem. Pfillii Cydoniorum ana unc. Sem. ponantur in Chart. Separatim.

Re Electuarii Lenitivi unc. duas Crem. Tart. unc. Sem. M. f.. Elect.

This laft Electuary was for Mr. Turner's Man, who had fate up feveral Nights, and complained of a great inward Heat and Costivenes; but however, because it was inferted in a Bill with Mr. Turner's Name to it I thought it convenient to take notice of it; tho it is no Poison, and in Mr. Turner had taken it himself, in would not have murdered him.

The forementioned things with Directions were taken as directed; am as to those, for the use of whice them

(115)

there was no Direction given, I shall here give an account how they were taken.

Once in about two Hours I mixt' half a Spoonful of the Oximel of Squils in a small quantity of the Apozem, and gave it him. Of the dulcified Spirit of Nitre I gave him ten Drops in almost every Draught of Liquor he drank. As for the Flea Bean and Quince seeds, I had one half of them boil'd in two Quarts of WV ater to the Consumption of one half; and of this mulaginous Decoction I now and then gave him a good Draught, it being a great Promoter of Expectoration. In the House I got made up a Lambative of fine salad Oil and Syrup of Vinegar, and of this I sometimes gave him a Spoonful. But all I could do availed nothing; I could by no artifice make him expectorate in any quantity, only sometimes he would discharge a green putrid Matter. He continued 01

(116)

to be short breathed to extremity, his Fever no whit abated, his Pulse low and irregular, and sometimes would totally intermit for two or three seconds, with a Stupidness in his Head.

About nine a Clock he again broke out into a most profuse Sweat, which I did by no means like, at which time I laid me down upon a Field Bed that was in the Room to fleep, choofing rather to lie so than go to bed, that I might be the more ready to be called upon occasion ; but having travelled near sixscore Miles in three days, and been two Nights upon the Road, I was very fleepy. About eleven a Clock my Lord Wharton called Madam Turner into the next Room to confult about sending for Dr. Babo; she left his Man sitting upon the Bed by him, I being fast asleep upon the Field Bed. Whilst Madam Turner was in the next Room with my Lord VV harton, Mr. Turner in the midst of this profuse Sweat +

Sweat leaps out of the Bed, and walkt round it to the Clofe-stool without any thing but his Shirt upon him : Madam Turner hearing some body walk in the Room barefoot, run in to see what was the matter, and found him in this posture; she was immediately followed by my Lord VV harton and some others : as soon as Madam Turner came in I awaked, and got up to help her to get him into the Bed. When he was put into Bed he laid himself into a Posture, out of which he never moved till he died, which was within a very few Hours. Whether this last getting out of the Bed was a shortning of his Life, I cannot be positive, but it is very probable it might. It is to be observed that the Night before about eleven a Clock, he was in such extreme Agonies, that every body thought he would have died then, at which time his Nails turned bluish; but upon his 13 recover-

recovering himself (which I believe was principally occasioned by the fight of his Lady, who just then came into him) his Nails never recovered their Colour, but continued bluish till he died. Now the Nails not returning to their Colour was as fatal a Symptom as could be.

I am forry I have been forced to rake up the Ashes of the Dead; but I having so often been charged with no less than the Murder of this Gentleman, I have been forced to write the: Case in my own vindication. I am sure: it was as much my Interest to preserve Mr. Turner as any one Man in England, there not being one to whom I am more obliged than I was to him, he having done me a great many fin. gular pieces of Service; and I am sure I would have gone as far, and done as much to have faved his Life, as any Man could have done for his Friend. Before I conclude upon this Subjet

(.119)

I shall presume to take notice of a thing, which happened, which was a kind of *Preludium* to his *Death*; and for ought I know the Thoughts of it might deject his Spirits, and have a fatal Influence upon him.

About April last Mr. Gadbury came to him, and told him, Mr. Turner, you will die in the Countrey this Summer, of a Surfeit of Drinking. He received it with a Smile, and said, 1 die with Drinking, who am the soberest Man in England ? that's impossible. In May he went to the Bath, but before he went there, he made his VVill, and was observed to be more melancholy than usual. He came back from the Bath very well, and told some of his Friends that Mr. Gadbury. was deceived : Some time after he went to Winchington, and just as he was going, one of his Friends bid him remember what Mr. Gadbury had said, and beware of drinking : he said he would,

(120)

would. As foon as he was taken ill (I suppose remembring Mr. Gadbury's Words) he told his Son that he should not recover.

CASE II.

July the eleventh I was sent for to Mr. Davis, a Gentleman of a very confiderable Estate near Lynn in Norfolk, who then lodged at Chelsey. He had a little before had the Small Pox, and after that a malignant Fever, having been under the care of another Physician, who had treated him after the common Method with Alkalies and Alexipharmicks; but his Case was now so deplorable, that his Friends despaired of his Recovery, so the former Physician was discharged, and I was sent for; when I came to him,

(121)

I found his Cafe as follows. He had a violent Peripneumony or Inflammation of his Lungs, his Breath being conftantly very fhort; but at fometimes he was fo extraordinary fhort breathed, that his Friends were afraid he would be ftrangled. He had a Fever upon him to a most intense degree, a great Stupor and Dulnes in his Head, a Nausea at his Stomach, and his Pulse very low and irregular, with a great Depression and Lowness of his Spirits. I prescribed for him to Mr. Baxter an Apothecary in St. Martins-lane as follows.

For Elq; Davis, July the 11th 97.

Befides

(123)

Besides the foremencioned things, I ordered him to eat Lemon and Sugar very often, and to drink Lemonade in as plentiful quantities as he pleased.

The next day I visited him again, and found him much after the same manner he was the day before, only his difficulty of breathing seemed to be somewhat abated; the VV ater he made in the Night was of a perfect Lead Colour, and his Pulse was very low and irregular, and would sometimes totally intermit. The Blackness of his VV ater and Irregularity of his Pulse made me very doubtful of his Recovery. I then prescribed the following Medicines.

Conf. Flor. Calendulæ :

R

Lujulæ, ana Dracm. sex Conf. Alkermes Dracm. unam Ol. Cinnamomi gut. tres Ol. Sulphur. per Campan. gut.xv Syr. Lujulæ q. s. f. elect. cap.

> Epidem. ana Unc. unam Syr. Garrioph. Dracm. fex

M. f. Cardiacum, cap. Cochlearia sex in languoribus.

The thirteenth I visited him again, his Pulse continued low and irregular, his Urine very black, his Fever nothing abated, but he began to expectorate a little, at which I was well pleased. In the Night he was taken with a Loosenes, which considering his long Illness before, he was not well able to bear. I prescribed as follows.

(125)

Aq. Cinnamomi Hord. Germ.querc. ana Unc.quatuor Epidem Unc. tres Mirabilis Unc. unam Theriacalis Dracm. fex. Conf. de Hyacyn.Drac. unam fem. Syr. Garrioph. Dracm. fex M. f. Julap. Cap. Cochlearia quatuor vel guinque frequenter.

Aceti Acerrimi Unc. sex Infunde clause & calide in Vase terreo vitreato per horas quatuor, & coletur, cap. Unc. quatuor quarta quâq; hora.

The fourteenth I visited him again; his

(126)

his Loofness was quite stopped, he spit prodigiously, upon which his Shortness of Breath was almost totally gone; his Fever was greatly abated, and his Pulse extreamly mended, and his Urine of a good Colour, and well digested. I prescribed as follows, and also ordered him to take liberally of his Mixture with Syrup of Vinegar to promote his Spitting.

 Aq: LaEtis Alex. Cinnamomi Hord. ana Unc. decem Vini Rubri Unc. sex Syr. Lujulæ Unc. tres Ol. Sulphuris gut. xvi
 M. f. Julap. cap. haust. larg. ad libitum.

The fifteenth, fixteenth and feventeenth he continued to take the forementioned things, during which time he spit like one in a Salivation; but he continued very weak, and having something of his Fever lurking within him, the eighteenth I prescribed the following Medicines.

(127)

R: Conf. Calendulæ Lujulæ ana Unc. femis Conf. de Hyacyntho Dracm. duas Crem. Tart. Dracm. tres Ol. Cinnamomi gut. duas Ol. fulp. per Camp. gut. xv Syr. Lujulæ q. f. f. elect. Cap. quant. Nucis Caftan. tertiâ quâq; borâ fuperbibendo hauft. Apozematis fequentis.

Rad. Eringii Unc. duas Aq. Hordei lib. tres bulliatur ad tertiæ partis confumptionem, coletur, colaturæ lib. unam sem. adde Aq. Cinnamomi Hord. Vini Rubri ana Unc. quatuor Syr. Lujulæ Unc. tres Ol. Sulphur per Camp. gut xx. M.

> Ol. Vitriol. dul. per digest. fact. Dracm. duas cap. gut. octo in omni haust. potus.

He continued the use of these things, and in a week's time his Fever was perfect-

R

(128)

fectly gone, he recovered Strength, and was perfectly free from his Shortnels of Breath, and all the other Symptoms that he complained of. I then prescribed the following Purge, which was repeated two or three times at due distances, and he is now as bale and hearty a Man as any in England.

Rerinæ Julap. gr. decem Antimonii Diaphoret. gr. xii Crem. Tart: scrup. unum Syr. Bals. q. J. f. bolus cap. primò manè cum regimine.

FINIS.

Advertisement.

Julit as the laft Sheet was going to the Prefs, I met with a Book call'd Alkali vindicatum, written by Dr. Coward, being Reflections on feveral things in the first part of my Effay of Alkaly and Acid. How far he has overthrown my Hypothefis I leave to all impartial Judges. For my part I don't think the Book worth a Reply: He has taken a great deal of Pains to fhew his Learning and Gentleman-like Education in his feurrilous Reflections upon me; but confidering the fervice his Book will do me, I think I have no reason to be angry with him.
